

A new offline handwritten database for the Spanish language (Spartacus for Spanish Restricted-domain Task of Cursive Script). There is a need for creating this corpus. First of all, most databases do not contain Spanish though Spanish is a widespread major language. Another important issue is to build a corpus from semantic-restricted tasks. These tasks are common in handwriting analysis and allow the use of linguistic knowledge beyond the lexicon level in

As the Spartacus database consisted mainly of short sentences and long paragraphs, the writers were asked to copy a set of sentences into one-line fields in the forms. Next figure shows one of the forms used in the process. These forms also contain a brief set of instructions given to the writers.
